

McElroy Hydraulic Clamping

Retrofit Kit for Rolling 412, TracStar® 412, Rolling 618, TracStar® 618, and TracStar® 500

Overview

One of the more popular features of large-diameter MegaMc® fusion machines is the hydraulic clamping that tightens the jaw clamps. Now, users can retrofit their Rolling and TracStar 412s; Rolling and TracStar 618s; and TracStar 500s with hydraulic clamping that replaces the standard manual crank clamp knobs. The retrofit kit can be installed by your local McElroy distributor and includes a manifold block that is added to the carriage and controls the two fixed jaw cylinders and two movable jaw cylinders independently. Included in the kit are two inner-upper jaws that are specific to clamping enabled machines.

Features

- Increased productivity due to not requiring manual cranking of clamp knobs
- Less time spent working with jaw operation and more time spent fusing pipe
- Quick disconnect hydraulic fittings are provided for fusing tees, ells, and tie-ins
- Retrofit kit can be installed at your local McElroy distributor

Part No.*

- A1262301 - Retrofit Kit for Rolling and TracStar 412
- A1870301 - Retrofit Kit for Rolling and TracStar 618
- AT5044801 - Retrofit Kit for TracStar 500

**These kits are compatible with any TracStar No. 412/PitBull No.412 and TracStar No. 618/PitBull No. 618 machine.*

Also compatible are the 412 and 618 Rolling machines introduced in 2003 under the model number series 12481XX & 18691XX.

New 412 and 618 machines can be ordered with hydraulic clamping preinstalled.
