

## Test Caps

McElroy Test Caps are designed for quick and easy air pressure testing of polyethylene pipe. All of our test caps are reusable, provide a positive o-ring seal, and have been pressure rated to 165 PSI to meet 49 CFR192.513. Installation and removal is quick and easy on pipe sizes from **1/2" CTS to 2" IPS**. Test pressure actually improves the cap's grip on the pipe. One test cap is required per pipe size. They are made of corrosion resistant material, and are durable in construction.

## TP-300 Test Caps

- Quick & easy air pressure testing of polyethylene pipe
- Easily installed and removed for repeated use
- Test Caps meet 49 CFR192.513
- Tests pipe sizes from 1/2" CTS to 2" IPS
- Safety lanyard for added operator protection
